In the nineteenth century there was no easy way to heat water. People generally used fires to do it, **(51)** ---- first they had to chop wood or collect coal, and then they had to light the fire and keep it burning. In cities, the wealthy heated their water with gas made from coal, but it didn't burn clean, and the heater had to be lit every time they wanted hot water; if they **(52)** ---- to put out the flame, the tank could blow up. **(53)** ----, in many areas, wood, coal or gas was expensive and hard to find. To get around these problems in rural areas, many farmers found a safer, easier and cheaper way to heat water: **(54)** ---- painting a metal water tank black and putting it in the sun to absorb as much solar energy as possible. Like yawning and coughing, scratching can be infectious. You see someone else scratching and soon you feel itchy yourself. Itch transmission has been investigated (86) ---- showing people pictures of fleas and ants. This can make them scratch (87) - --- watching someone else scratching produces the strongest response. A possible clue as to why this happens may be (88) ---- when a drop of histamine, a substance given out in the body in response to an allergy, is dropped on someone's skin. This makes them itchy, but they scratch all over, not just where the drop was placed. This suggests a mechanism that makes us hypersensitive to skin sensations and lowers the threshold for wanting to scratch, which (89) ---- the cause of infectious scratching. Why do we have it? Other primates also behave this way (90) ---- several reasons. One theory is that it evolved in social species to help them notice and deal with parasitic infections. (LYS – 2013)
